

Commercial Sector

iGuzzini, Guildford

Client/Project: iGuzzini
Consultant Harley Haddow
Cost: £15m

CA-HVAC worked on different stages of this project to incorporate *Renewables* into the design where possible. We supplied VRF heat pumps in the Ground Source Heat Pumps (GSHP) via closed loop thermal piles. Similar pumps were used in the air source gas and electric VRF heat pumps. Additional battery coils were fitted into our Calorifiers utilising photovoltaic solar energy. Booster sets, break tanks and pressurisation equipment were also supplied by CA-HVAC Thermal Supplies.

The project was assessed for "Excellent" BREEAM rating.
